

### ***Editorial***

Editorials should be brief, descriptive, substantive and should entice the reader to open, flip through, and read the journal. However, today I have to make an exception and I will devote this editorial to a sad reality. Every professional periodical must have its own editor and editorial board. If everything works as it should, then a team of these people is formed who are close in work and thought and can even become friends. This is also the case with colleagues prof. Rastislav Rajnoha, who unfortunately left us prematurely in the past months at a young age.

Since he was also my friend, these lines are also very difficult to write, far more difficult than the scientific article itself. Prof. Rajnoha was a passionate scientist who was an asset wherever he appeared and began to work. His exemplary passion for science resulted in many important, impactful, and very interesting articles. He was able to move his field another imaginary step forward. With his enthusiasm, he won many friends, colleagues, and partners from practically all corners of the world. It was a pleasure to listen to the interest with which he talked about his work, the science and the articles and plans for future projects. He was a great beneficiary not only to this journal and we remember in our hearts his cheerful stories and optimistic approach to everything he undertook. We will miss you. R.I.P.
